

# CRYSTAL SNOWFLAKES

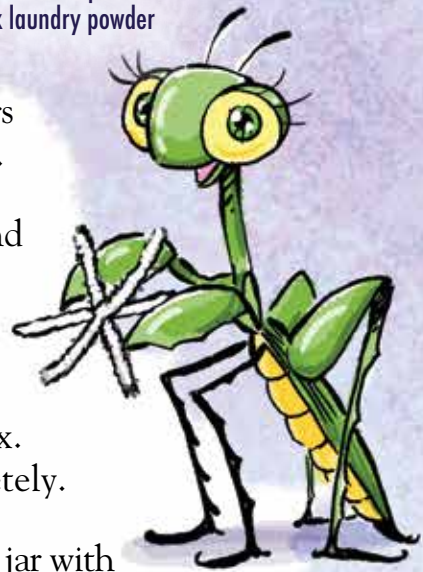

BRIGHTEN UP YOUR wintery windows with these dazzling crystal snowflakes.

## What You'll Need:

## What to Do:

1. Make the snowflake shape with the pipe cleaners by twisting three equal length pieces together.
2. Tie the string to one of the snowflake arms and tie the other end to the pencil.
3. Ask an adult to fill the jar with boiling water.
4. For each cup of water, add 3 tablespoons borax. Stir to make sure the powder dissolves completely.
5. Hang your pipe cleaner snowflake inside the jar with the pencil resting on top. The snowflake should be completely covered with liquid and not touch the sides or bottom of the jar.
6. Let the snowflake sit in the jar overnight to crystallize. In the morning lift the snowflake out of the water, hang it up to dry, and admire your crystal creation!

Love,  
Ophelia
